SANKAR GROUP

FRONT-END DEVELOPMENT

Internship Assignment | 48-Hour Deadline

1. Assignment Overview

Objective: Build a simple, responsive website interface to demonstrate your front-end development skills. Focus on clean design, usability, and working interactions.

Task: Create a landing page for any SaaS product. You may choose an existing product or invent a simple product idea. The page should explain the product and encourage visitors to sign up or request a demo.

2. Required Website Sections

- **Navigation bar:** Product name or logo, navigation links, and a Sign Up / Get Started button.
- **Hero section:** Product headline, short description, call-to-action button, and a relevant visual or illustration.
- **Features:** At least three key product features displayed using cards, icons, or content blocks.
- **About / How it works:** Briefly explain what the product does and how customers use it.
- **Pricing:** Show at least two simple plans or packages.
- **Contact / Footer:** Add contact details or a demo request section and a footer.

3. Basic Functional Requirements

- Navigation links should move to the relevant sections of the page.
- Buttons should perform a meaningful action, such as scrolling to a section or opening a simple form.
- If you add a form, include basic input validation and show a success message. No backend is required.
- The website must be responsive and usable on both mobile and desktop screens.
- Use consistent spacing, readable typography, and a clear visual hierarchy.

4. Technology

Use HTML, CSS, and JavaScript, or React if preferred. You may use Bootstrap, Tailwind CSS, or another UI library. AI tools may be used for assistance, but you should understand and be able to explain your code.

SUBMISSION & EVALUATION

Front-End Development Internship Assignment

5. What to Submit

- Working website deployed online (preferred), or clear instructions to run it locally.
- Complete source code in a GitHub repository or ZIP folder.
- README file with setup instructions and technologies used.
- Two or three screenshots showing desktop and mobile layouts.
- A short explanation (5–8 lines) describing your design choices and any challenges solved.

6. Suggested 48-Hour Plan

Time	Work
Hours 0–4	Choose a SaaS idea, plan the page sections, and create a basic layout.
Hours 4–20	Build the page structure, styling, and main sections.
Hours 20–32	Add responsive design, navigation, buttons, and form interactions.
Hours 32–48	Test on mobile and desktop, fix issues, deploy, and prepare submission.

7. Evaluation Criteria

Area	Weight
Layout, visual design, and consistency	25%
Responsive design (mobile and desktop)	20%
Code structure and readability	20%
Working navigation, buttons, and form interactions	20%
Submission quality and explanation	15%

8. Important Instructions

- This is a basic front-end assignment. Backend, database, login, and payment integration are not required.
- A static screenshot or design file alone is not accepted. The website must run and its basic interactions must work.
- Sample content and placeholder images are acceptable. Do not expose passwords, API keys, or private credentials.
- Be prepared to explain your code and demonstrate the website.

SUCCESS CRITERIA

Create a clean, responsive SaaS landing page that looks professional, works on mobile and desktop, and includes functional navigation and basic interactions.
